

### CITY OF CODY, WYOMING

Projects completed for the City of Cody include treated water and sanitary sewer replacement, sewer lining, street rehabilitation, bike path development, river access road surfacing, and boundary surveying.

### CITY OF POWELL, WYOMING

Projects include the design and installation of about a mile of 12-inch and 8-inch ductile iron water line with appurtenances and boring beneath the BNSF railroad, and street reconstruction including underground utilities, storm water facilities, and street/sidewalk improvements. We also provide airport engineering for the City.

### CITY OF RIVERTON, WYOMING

Water and sewer replacements, extensions and expansion, and underground drain improvements are items included in the services provided in our work for the City.

### WYOMING DEPARTMENT OF TRANSPORTATION

Our projects with WYDOT include reconnaissance reports and complete roadway designs. These designs involved turnkey services throughout the spectrum of WYDOT's plan development process.

### PARK COUNTY, WYOMING

SCE is currently contracted to provide turnkey road design services for Park County Road 6UU (Diamond Basin Road). On behalf of the County we have also facilitated the design and construction of the County's bridge over Legg Creek within the Shoshone National Forest.

## PUBLIC INFRASTRUCTURE

Treated water, sanitary sewer, streets, highways and roads, recreation facilities, and boundary surveying are the types of work Sage Civil Engineering has successfully performed for our governmental clients. We have performed work for or coordinated with several governmental entities to upgrade or install new infrastructure. In addition to the cities of Cody and Powell, we have worked with the municipalities of **Worland, Riverton, Casper, Rawlins, and Saratoga** as part of projects administered by outside agencies or boards, or in conjunction with other engineers.

Our work detailed in our "Residential Subdivisions/Site Development" section has required us to coordinate and work closely with the cities of Cody and Powell. This has resulted in our keen understanding of codes, ordinances, and development standards that are a part of all municipalities.

Working with governmental entities has given us opportunities to build relationships with quality people, while performing services for the mutual gain of our company and the taxpayer.
