

YELLOWSTONE REGIONAL AIRPORT – CODY, WYOMING

SCE provided on-site construction observation and surveying for Morrison-Maierle, Inc. for the construction of the airport terminal building, access road, vehicle parking, and aircraft apron. MMI was the design engineer, with whom we have an excellent working relationship – partnering on both YRA and the Powell Municipal Airport.

MOOSE JUNCTION, WYOMING – GRAND TETON NATIONAL PARK

Hardrives Construction Co., an 8A construction company out of Billings, MT contracted with us to provide a project engineer to aid in construction management/observation as required by their contract with the FHWA – Western Federal Lands Highway Division.

U.S.F.S. ADMINISTRATIVE FACILITY – COOKE CITY, MONTANA

For Bairco Construction, Inc. of Lovell, Wyoming, SCE provided on-site concrete testing, which required A.C.I. certified testing personnel.

CONSTRUCTION ADMINISTRATION

Sage typically sees projects through from the pre-design through the final report, which includes construction administration. Our personnel have years of experience in observation and administration to be certain our projects are completed on time, within budget, and per the design and specifications. We are extremely diverse in our experience having observed/administered projects involving highways, streets, airports, utilities, irrigation pipelines and structures, and bridges. Our construction team includes certified testing personnel as well as licensed engineers and surveyors.

SCE can also provide construction administration for outside projects as well. We have conducted bidding, contract administration, and observation on several projects designed by third parties, as well as providing resident project representatives for construction contractors. Our experience and communication skills will ensure your project is completed in accordance with the plans and specifications, and documented to ensure that accurate record drawings and documents can be prepared for future use.
